OHA COVID Vaccine Research

January 2021
Research purpose

- Assess willingness to get vaccinated for COVID-19
- Identify attitudes and concerns about a COVID-19 vaccine
- Explore reactions to messages about reasons to get vaccinated
Methodology

- Online survey of n=830 Oregonians, including oversample of n=218 people of color
- Conducted January 4–14, 2021; 14 minutes to complete
- Quotas and weighting by age, gender, ethnicity, area of state, and education ensure results are representative of the state
- Margin of error ±3.4%
- Due to rounding, some totals may differ by ±1 from the sum of separate responses
Key takeaways

- Willingness to get the vaccine has remained steady since December.
  - About 4 in 10 definitely will get vaccinated (1% already have)
  - About 2 in 10 definitely will not get vaccinated

- A strong majority, 73%, say it makes no difference to them that the vaccine requires two doses.

- Those who plan to definitely get the vaccine also plan to do so as soon as it is available to them.
Key takeaways

- Top concerns about the COVID-19 vaccine are about the side effects, effectiveness, and safety. This is also the information Oregonians say they most want to hear about the vaccine.

- Protecting others, avoiding COVID, and protecting one’s self are the most common motivations to get the COVID-19 vaccine.
Key messaging takeaways

- People who have first-hand experience with COVID-19 or the vaccine are seen as effective influencers.

- Friends and family also exert influence when it comes to willingness to get vaccinated for COVID-19.

- Messages that the COVID-19 vaccine is effective and will stop the virus are seen as convincing reasons to get a vaccine.
Key messaging takeaways

- When asked to choose one message, Oregonians identify freedom to return to normal life and recommendations from doctors and medical scientists that the vaccine is the most effective way to stop the virus as most convincing.

- Messages that address side effects and the development of the vaccine are largely seen as believable.
  - The message you cannot get sick from the vaccine is less believable and less convincing.
Key messaging takeaways

- After hearing information that it will be several months before the COVID-19 vaccine will be available to most people, over 3 in 10 Oregonians expect to be more cautious in the next few weeks.

- A message to *keep our guard up* appears more effective at encouraging vaccine hesitant Oregonians to be more cautious in the next few weeks.
Willingness to get COVID-19 vaccine
6 in 10

Are likely to get vaccinated for COVID-19.
Willingness to definitely get vaccinated has not shifted since December, as the vaccine has rolled out.

1% have already been vaccinated
Oregonians are more likely than other Americans to definitely get the vaccine.

Oregon: 38% definitely get, 29% probably get, 20% probably not get, 11% definitely not get
US: 31% definitely get, 21% probably get, 21% probably not get, 19% definitely not get

US data: Pew, Nov 18-29, 2020
Overall, willingness to get a COVID-19 vaccine is comparable to willingness to get the flu vaccine.

Willingness To Get the COVID-19 Vaccine

- Already have 1%
- Definitely will 38%
- Probably will 20%
- Willing 59%

Willingness To Get the Flu Vaccine

- Already have 24%
- Definitely will 21%
- Probably will 14%
- Willing 59%
Willingness to get vaccinated varies by location: Tri-county residents, Willamette Valley residents, and Oregonians living in suburban or urban communities are more willing to get vaccinated.

Definitely or probably get COVID-19 vaccine

<table>
<thead>
<tr>
<th>Location</th>

Men, Oregonians with a college degree, and older Oregonians are more willing to get vaccinated.

Definitely or probably get COVID-19 vaccine

- Men: 64%
- Women: 53%
- College +: 72%
- Some college: 56%
- HS or less: 47%
- 70+: 74%
- 50–69: 60%
- 30–49: 54%
- 18–29: 53%
Ideological differences continue to shape COVID-19 attitudes: conservatives are less willing to get vaccinated.

Definitely or probably get COVID-19 vaccine

- Liberal: 74%
- Moderate: 62%
- Conservative: 48%
Native American residents are least willing to be vaccinated.

Definitely or probably get COVID-19 vaccine

- Asian: 63%
- White: 60%
- Latinx: 57%
- Black: 46%
- Native American: 34%
- Other identities: 69%
Over 7 in 10 Oregonians say that having two doses of the vaccine does not make a difference to them.

- 73%: It makes no difference to me if there are two doses for the vaccine
- 12%: Because there are two doses, I am less likely to get the vaccine
- 15%: Don’t know

DHM RESEARCH | OHA COVID VACCINE RESEARCH | JANUARY 2021
When asked to consider when they would get the vaccine, over 4 in 10 Oregonians plan to get it as soon as it is available to them.
Those who have decided to get the vaccine will do so immediately.

<table>

- Definitely Get: 15%
Questions about COVID-19 vaccine
Over half of Oregonians say they have no questions about the COVID-19 vaccines.

59% No questions
Those who do have questions are most concerned about side effects, effectiveness, and safety of COVID-19 vaccines.

- **19%** Side effects
- **12%** Effectiveness: new strains, longevity
- **11%** Safety
  - **6%** Concerns over quick development, EUA, enough testing
  - **5%** Long-term effects
Oregonians most want to hear information about side effects, effectiveness, and safety.

- Side effects of the vaccines: 66%
- Effectiveness of the vaccines: 59%
- Safety of the vaccines: 57%
- How and where to get the vaccines: 40%
- Cost of the vaccines: 30%
- Who is being prioritized to receive the vaccines: 28%
- Who should get the vaccines: 19%
- Other: 5%
- None of the above; I am not interested in any of this information: 13%
Reasons to get or not get vaccinated for COVID-19
Protecting others is a top motivator to get the COVID-19 vaccine, although desire to protect one’s self is comparable to the desire to protect others.

24% Protect others
19% Avoid COVID, illness, death
18% Protect self, get immunity
16% Eliminate COVID, herd immunity
8% Age or underlying conditions
Concerns about side effects is the most common reason Oregonians would not get vaccinated.

- **25%** Side effects
- **10%** Developed too quickly, not enough testing or research
- **8%** Ineffective, won’t protect from COVID, new strains
- **7%** Safety concerns
- **6%** Mistrust vaccines (general)
- **6%** Allergies/medical conditions
Messengers
Those who have already gotten the COVID-19 vaccine or have lost loved ones to the disease are influential messengers.

<table>

<td></td>
</tr>
</tbody>
</table>
When asked to pick the most convincing message, those in Split A chose the message that vaccines provide freedom to return to normal life.

Once people get vaccinated, we will be free to see our loved ones, celebrate holidays together, and get back to normal life. 20%

We have to find a better way to stop the virus than what we are doing right now. Vaccines are the most effective way to do so. 15%

When enough people get the vaccine, the virus won’t spread and our communities will be safer. 14%

The COVID-19 vaccine does not inject the virus into the body. Instead, this vaccine activates our body’s natural defense system to stop the disease. 13%

We do not know the long-term impacts of getting COVID-19. It is better to get the vaccine to protect myself than to risk getting the virus. 9%

COVID-19 has hit Black, Indigenous, and people of color the hardest. We need to do what we can to keep each other safe. 3%

None of these 26%
When asked to choose one message, those in Split B found doctors and scientists’ recommendations most convincing.

Doctors and medical scientists say the vaccine is the safest and most effective way to stop the spread of the virus.

Once people get vaccinated, we will be free to open up businesses and schools again and get back to normal life.

This vaccine activates our body’s natural defense system to stop the disease.

We have to find a better way to stop the virus than what we are doing right now. Vaccines are the most effective way to do so.

Thousands of doctors and nurses are lining up to get the vaccine. They say the vaccine will protect people from this deadly virus.

COVID-19 has hit Black, Indigenous, and people of color the hardest. We need to do what we can to keep each other safe.

None of these
Oregonians find multiple statements believable about side effects and the development of the vaccine; it is less helpful to state side effects will occur or how to interpret side effects.

While you may experience side effects after getting the vaccine, it is worth avoiding serious illness for you and your loved ones.

While these particular vaccines are new, scientists and health care providers have been working for years to come up with similar vaccines to prevent similar viruses.

These vaccines were developed and tested in real-life scientific studies with tens of thousands of people around the world from many ethnic and cultural backgrounds, including some Oregonians.

Because of research and testing, these new vaccines are safe for your body even if you experience some mild side effects.

While you may have mild side effects, you cannot get sick with COVID-19 from getting the vaccine.

Side effects of the vaccine are signs that your immune system is working to build immunity to the COVID-19 virus.

After reading that it would be months before vaccination is available, participants read one of three mindset messages.

**All:** We have spent months living with this pandemic and it will be months before vaccination is available to everyone. While health care workers and nursing home residents get the vaccine, everyone else will be asked to continue to wear masks, avoid large gatherings, and maintain physical distance for several months.

**Split C:** If everyone takes personal responsibility to help stop the virus from spreading, I’ll soon have the freedom to do the things I want to do in my life.

**Split D:** This has been a very challenging year but our efforts to slow the spread of the virus are making a difference. We should all keep working together to keep our community safe.

**Split E:** The threat of this deadly virus is still very real. We have to keep up our guard to prevent getting infected or infecting our friends and family.
Around 3 in 10 Oregonians expect to be more cautious in the next few weeks and this did not vary much regardless of which message they read. *Personal responsibility* may be somewhat less effective than *keeping our guard up*.
Oregonians who are vaccine resistant are more likely to expect to be more cautious in the next few weeks after reading the *working together* message.

Targeted messaging profiles for audiences who are vaccine hesitant or resistant
Top messages overall are also effective messages for those who are uncertain about getting a vaccine. Consider additional focus on Oregonians with less education and those who do not have health insurance.

Willingness To Get Vaccine

42% are not certain if they will get the COVID-19 vaccine (n=347)

Top questions vaccine hesitant mention about the COVID-19 vaccine:
- Side effects: 28%
- Effectiveness: 17%
- Safety: 17%

Most important reasons vaccine hesitant mention to get vaccinated:
- Protect others: 24%
- Avoid COVID: 24%
- Protect self: 19%

People more likely to be vaccine hesitant:
- Live in Rest of State: 45%
- Have HS degree or less: 48%
- Do not have health insurance: 47%

Top messages among vaccine hesitant
- Get back to normal life (Split A): 17%
- Doctors and scientists recommend (Split B): 21%

Biggest reasons vaccine hesitant mention to NOT get vaccinated:
- Side effects: 35%
- Ineffective: 12%
- Developed too quickly: 10%
Conservative Oregonians are less willing to get vaccinated and more often mention concerns about the speed of vaccine development. The most effective messages focus on freedom.

- **Top questions conservatives have about the COVID-19 vaccine:**
  - Side effects: 20%
  - Safety: 15%
  - Effectiveness: 10%
  - Quick development: 10%

- **Most important reasons given by conservatives to get vaccinated:**
  - Protect self: 19%
  - Avoid COVID: 16%
  - Protect others: 15%

- **Top messages among conservatives:**
  - Free to see our loved ones (Split A): 25%
  - Free to open up again (Split B): 25%

- **Biggest reasons given by conservatives to NOT get vaccinated:**
  - Side effects: 34%
  - Developed too quickly: 16%
  - Ineffective: 7%
  - Mistrust vaccines: 7%

*Willing To Get Vaccine:
- Definitely get: 29%
- Probably get: 19%
- Probably not: 17%
- Definitely not: 26%
- Not sure: 8%*

*n=232*
With 58% of Black Oregonians unsure or uncertain of whether to get vaccinated, it is important to reach out before they make up their mind not to. Emphasize that the vaccine is effective at stopping COVID-19.

<table>
